

Google Workspace Deployment & Security Implementation (Live Environment)

Reporting and Monitoring Capability Review

Available in Current Environment (Google Workspace Business Starter):

- Admin activity logs (user and configuration changes)
- Basic user/login activity visibility
- 2-Step Verification (2SV) enrollment visibility

Limited or Not Available (Higher-Tier Features):

- Advanced security alerts and automated threat detection
- Detailed audit logs for all services
- Investigation tool for deep event correlation
- Data loss prevention (DLP) reporting

Observations:

The current environment provides sufficient visibility for basic administrative monitoring and user activity tracking. However, advanced security monitoring and automated alerting capabilities require higher-tier Google Workspace editions.

This demonstrates an understanding of how platform licensing impacts security monitoring capabilities.
