

# Website SEO Deployment (Real-World Business Implementation)

**By:** Chontele Coleman

**Date:** 4/8/2026

## Project Overview

This project documents the implementation of SEO configuration and performance optimization for a live Squarespace business website.

The work focuses on improving search visibility, optimizing metadata, validating accessibility, and analyzing performance within a real production environment. The project reflects practical constraints and real-world decision-making.

---

## Objectives

- Configure site-wide SEO settings
- Optimize page-level metadata
- Ensure full search engine visibility
- Evaluate website performance using Lighthouse
- Identify and attempt performance improvements

## Phase 1 — Site Preparation

The website was reviewed to ensure it was publicly accessible and available for search engine indexing.

### Result:

- Site confirmed as public
- No access restrictions impacting visibility

**Figure 1: Website Public**

## Phase 2 — Site-Wide SEO Configuration

Site-wide SEO settings were configured to control how the website appears in search results.

This included optimizing the SEO title format and site description to reflect:

- Business name
- Services offered
- Geographic location

### Result:

- Site-wide SEO successfully configured
- Consistent branding across search results
- Improved relevance for search queries

**Figure 2: SEO Appearance Page**

## Phase 3 — Page-Level SEO Optimization

All primary pages were individually optimized to ensure unique and relevant metadata.

Each page includes:

- Unique SEO title
- Unique SEO description
- Clean, readable URL structure

### Result:

- All key pages contain optimized metadata
- All images include alt text for accessibility and search visibility
- No technical SEO gaps identified

Figure 4: Home Page Optimized

## SEO & AI Visibility Results

### SEO Performance

- **SEO Score:** 100%
- **Search Visibility Score:** 70% (Good)
- **Pages with Metadata:** 5 / 5
- **Images with Alt Text:** 15 / 15

## AI Visibility

- Branded Prompts: Not yet referenced
- Non-Branded Prompts: Not yet referenced

## Analysis

The website is fully optimized from a technical SEO perspective. The 70% visibility score indicates that the site is properly structured for discoverability across search engines and AI platforms.

AI visibility is currently limited, which is expected for a newly optimized website. Visibility in search engines and AI systems develops over time based on:

- Content relevance
- User engagement
- Domain authority
- External signals such as backlinks and reviews

## Result:

- Strong technical SEO foundation established
- No barriers to indexing or discoverability

Figure 5: SEO & AI Visibility Results

## Phase 4 — Search Visibility & Page Availability Validation

A full review of page settings was conducted to ensure no pages were unintentionally restricted.

### Validation Results:

- No pages hidden from search results
- No pages disabled
- All primary pages publicly accessible

### Result:

- Full site visibility confirmed
- All pages available for indexing and user access

**Figure 6: No pages intentionally blocked or hidden**

## Phase 5 — Performance Review (Lighthouse Audit)

A Lighthouse audit was conducted using Google Chrome DevTools to evaluate performance, accessibility, best practices, and SEO.

### Audit Results

- **Mobile Performance:** 53
- **Desktop Performance:** 76
- **Accessibility:** 98
- **Best Practices:** 100
- **SEO:** 92

**Figure 7: Lighthouse Results for Mobile Version**

**Figure 8: Lighthouse Results for Desktop Version**

## Findings & Analysis

- Accessibility (98) and Best Practices (100) indicate strong usability and adherence to modern web standards
- SEO score (92) confirms effective metadata and structural optimization

- Desktop performance (76) falls within the good range
- Mobile performance (53) is moderate and typical for Squarespace environments

## **Optimization Opportunities**

- Image size optimization for improved mobile performance
- Reduction of unnecessary sections or visual elements
- Minimizing layout shifts and render-blocking elements

## **Performance Optimization Attempts**

Several improvements were implemented, including:

- Replacing oversized images
- Removing unused sections
- Reducing animations
- Simplifying mobile layout
- Cleaning up heavy content blocks

Despite these efforts, performance scores remained consistent.

## **Platform Considerations**

Performance limitations are influenced by Squarespace, including:

- Preloaded scripts and styles
- Template-based rendering
- Limited backend optimization control

## **Performance Conclusion**

Performance optimization efforts were successfully implemented at the content and layout level. However, final scores remained stable due to platform-managed constraints.

This reflects a realistic production scenario where performance tuning is limited by the capabilities of the platform rather than configuration alone.

## **Final Conclusion**

The website is fully optimized from a technical SEO perspective and is positioned for growth in search and AI visibility.

All SEO configurations have been successfully implemented, and no technical barriers to indexing or discoverability exist.

Future improvements in visibility will be driven by:

- Content development
- Local SEO efforts
- User engagement and external signals

This project demonstrates a complete, real-world implementation of SEO configuration and performance analysis within a production environment.
